

IN THE CLAIMS

1. (Withdrawn) A process of recycling litter to make fertilizer, comprising:

pasteurizing raw material comprising poultry litter;

drying the pasteurized material;

reducing the dried material to a powder; and

pelleting the powder to granular and homogenized pellets.
2. (Withdrawn) A fertilizer produced according to the process of Claim 1.
3. (Withdrawn) The process of Claim 1, further comprising scrubbing the litter to

reduce odor.
4. (Withdrawn) The process of Claim 1, wherein the litter is heated from about

180°F to 225°F during the pasteurizing stage.
5. (Withdrawn) The process of Claim 1, wherein the pellets are about 1 mm to 6.5

mm long.
6. (Withdrawn) The process of Claim 1, wherein the pellets comprise of organic

matter and humus.
7. (Withdrawn) The process of Claim 1, further comprising entrapping odor of the

litter.
8. (Withdrawn) The process of Claim 3, wherein scrubbing the litter produces

moisture.
9. (Withdrawn) The process of Claim 8, wherein the moisture from scrubbing is

captured and re-used in the pelleting stage.
10. (Currently Amended) A poultry litter fertilizer manufacturing system,

comprising:

a raw material ventilation system including comprising a filter and a scrubber for

treating air by removing dust and odor produced from a raw material from the air prior to drying said raw material;

a dryer system, connected to said ventilation system to receive said ventilated raw material for pasteurizing said raw material comprising poultry litter, drying the pasteurized material to form a dried material, and reducing the dried material to a powder, said dryer system being structurally ordered in said manufacturing system so as to receive said raw material after said raw material is treated by said raw material ventilation system; and

a pelleting system for producing granular and homogenized pellets from the powder.

11. (Currently Amended) The system of Claim 10, wherein ~~the air treating by the scrubber~~ is capable of producing ~~produces~~ moisture in treated air.

12. (Currently Amended) The system of Claim 11, wherein said pelleting system is capable of reusing ~~reuses~~ captured moisture produced by the scrubber.

13. (Previously Presented) The system of Claim 10, wherein the pelleting system comprises two pellet mills, each pellet mill capable of producing 10 tons of pellets per hour.

14. (Previously Presented) The system of Claim 10, further comprising a finish area ventilation system for cooling and storing the pellets.

15. (Currently Amended) The system of Claim 10, wherein the dryer system is capable of heating ~~heats~~ the raw material from about 180°F to 225°F during pasteurization.

16. (Previously Presented) The system of Claim 10, wherein the pellets are about 1 mm to 6.5 mm long.

17. (Previously Presented) The system of Claim 10, wherein the pellets comprise organic matter and humus.
